- With the pedal off, insert the Dongle Wi-Fi USB Adapter (Edimax EW-7811UN* - separated accessory) in the USB port.

- Switch the pedal on and the dongle will start to flash.

- Check the Wi-Fi Network of your mobile phone or tablet and connect it to the SIM1Hotspot, by digiting the following password: 1234567890.

- Open the "SIM1 Guitar" app that your previously downloaded from the iOS App Store or from Google Play.

* The App and XT-1 are configured to be used with this Dongle Wi-Fi model only

6

The app is now connected to "SIM1 Hotspot" of your device XT-1, through Wi-Fi System of your mobile/Tablet.

Your mobile or tablet are not connected to the internet. This means that <u>you have to disconnect from the pedal to use the internet</u> (for example to buy a new guitar from the in-app purchase system) and then reconnect again to XT-1 (to send this guitar to the pedal).

Solution: This section allows to <u>connect both, XT-1 and your mobile phone, to the same Wi-Fi network</u>. They will be able to communicate one with each other, without losing the internet connection.

Write configuration

When connected to "SIM1 Hotspot", write name and password of your WI-FI home or office network.

Click "Write configuration", the pedal will automatically restart, and both devices will be connected to the same router. XT-1 will memorize this network and will be automatically connected to it every time is nearby this Wi-Fi spot.

<u>NB: When XT-1 is connected to your Wi-Fi Network, SIM1Hotspot is not visible anymore. Switch off your router and restart XT-1 if you wish to have a direct connection with XT-1</u>
